# Managed WiFi

Managed WiFi

A robust wireless access point for your customers and your business. Intuitive, easy to deploy, configure and manage all while gathering dynamic analytics for a smarter and safer network.

Location Analytics

Real-time location statistics improve customer engagement by capturing total number of visitors, total visits for a given site, repeat visit rate, and median visit length.

Layer 7 Application Visibility

Traffic analytics and granular, user-level data help optimize network and user performance. Layer 7 visibility combined with the group policy feature gives you greater flexibility in designing your privacy policies.

Wireless Health

Our powerful heuristics engine rapidly identifies anomalies impacting end users' experience across every stage of client connectivity - association, authentication, IP addressing, and DNS availability - for rapid root cause analysis and response.

Guest Wi-Fi

Deploy guest access using WiFi with a splash page, radius server, SMS, or Facebook login in seconds on the Managed WiFi dashboard.

Auto-RF Optimization

Delivers top performance in high-density or challenging environments by providing real-time and historical metrics on maximum system-wide performance.

Air Marshal (Wireless Intrusion Prevention)

IT round-the-clock protection and security from network vulnerabilities. The APs scan an environment and take preemptive action based on your preferences.

About Glo Fiber Enterprise

Our parent company, Shentel, has been in this business for roughly 120 years. Our advanced fiber network is built to ensure you keep pace with the ever-changing demands of our connected world.

Intuitive, Robust Wireless Connectivity

Zero-Touch Provisioning

Simplifies deployment even before hardware arrives - the true plug-and-play deployment.

Unmatched Visibility

The dashboard gives visibility into the network users, their devices, and their applications. Armed with rich analytics, administrators can quickly create access control and application usage policies, optimizing both the end-user experience and network security.

Live-troubleshooting Tools

Efficiently help eliminate downtime and keep your network up and running.

Intelligent Analytics

Your wireless network is analyzed to allow trends to be visualized and detect anomalies in the network. Allowing our team to quickly identify troubling patterns and correct them before they become an issue.

Client network Access

See what your client's are doing on your network and see what applications are used most.
